2019-2023

Bachlors of Science in Software engineering

University of Engineering and Technology

Expertise

- Unity 3d development
- Android Development

Language

English

Experience

Aug 2023- Present

Factorial Studios

Game developer

I bring extensive game development experience across diverse genres. Under the Skibidi theme, I specialized in titles like Hide&Seek, Toilet Robot, Shooting Game, and Toilet Game Parker Adventure, focusing on enemy navigation, raycasting, and player behaviors with excellent performance and reception. Beyond Skibidi, I've contributed to Monster Truck, Monster Truck Stunts, King Truck, Milk Tanker, Jeep Simulator, Animal Transporter, Garbage Truck, and life simulators like Virtual Mother, Grimzey, and Poisoner Escape, showcasing versatility and expertise in various gameplay mechanics. Recently, I applied my skills to develop a 2D hyper-casual game, Teacher Puzzle, gaining in-depth knowledge of puzzle mechanics.

I also have experience with CAS Ads and AdMob includes integrating ad SDKs into apps/websites, optimizing ad placements (banners, interstitials, etc.), using CPC, CPM, CPI for revenue, A/B testing for performance, analytics for tracking, compliance with ad policies, and troubleshooting ad issues.

In addition to ad management, I've specialized in integrating and optimizing in-app purchases for mobile games. This includes implementing features for players to buy virtual goods, upgrades, or subscriptions directly in-game, enhancing user engagement and revenue potential through effective monetization strategies.

Skills

C#, C++, Java

Projects

- Teacher Puzzle
- Garbage truck
- Toilet Robot
- Virtual mother family Life Sim
- Prison Escape
- Oil Tanker truck games
